Maximum Marks	2 Marks

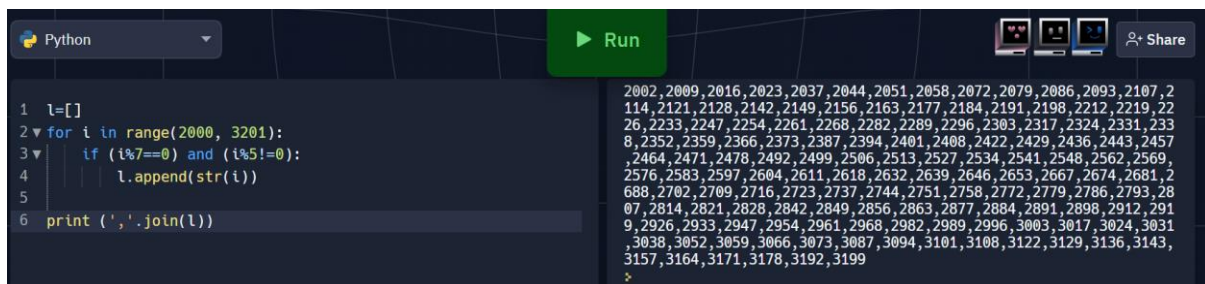

Question-1:

Write a program which will find all such numbers which are divisible by 7 but are not a multiple of 5, between 2000 and 3200 (both included). The numbers obtained should be printed in a comma-separated sequence on a single line.

Solution:

```
l=[]
for i in range(2000, 3201):
    if (i%7==0) and (i%5!=0):
        l.append(str(i))

print(','.join(l))
#-----#
#-----#
```

The screenshot shows a Python IDE with a dark theme. On the left, the code editor contains the following code:

```
1 l=[]
2 for i in range(2000, 3201):
3     if (i%7==0) and (i%5!=0):
4         l.append(str(i))
5
6 print(','.join(l))
```

On the right, the output window displays a long list of numbers separated by commas, representing all numbers between 2000 and 3200 that are divisible by 7 but not by 5. The numbers start with 2002 and end with 3199. A green 'Run' button is visible above the output window.

Question-2:

With a given integral number n, write a program to generate a dictionary that contains (i, i*i) such that i is an integral number between 1 and n (both included). and then the program should print the dictionary.

Suppose the following input is supplied to the program:

8

Then, the output should be:

{1: 1, 2: 4, 3: 9, 4: 16, 5: 25, 6: 36, 7: 49, 8: 64}

Solution:

```
n=int(input())
```

```
d=dict()
```

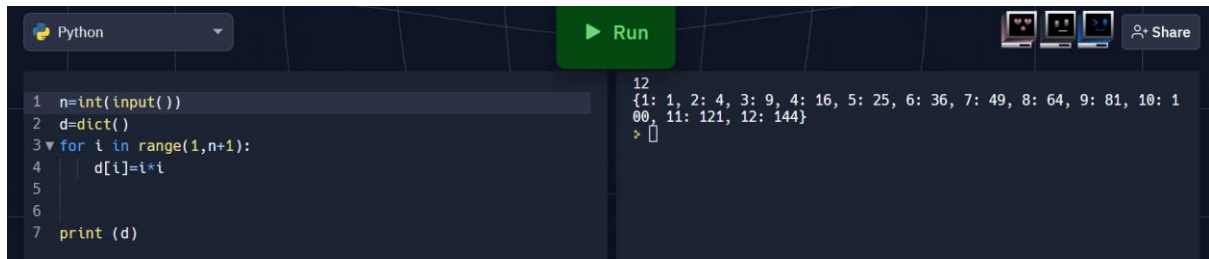

```
for i in range(1,n+1):
```

```
    d[i]=i*i
```

```
print d
```

```
#-----#
```

```
#-----#
```

The screenshot shows a Python IDE with a dark theme. The left pane contains the following code:

```
1 n=int(input())
2 d=dict()
3 for i in range(1,n+1):
4     d[i]=i*i
5
6
7 print (d)
```

The right pane shows the output of the code, which is a dictionary: {1: 1, 2: 4, 3: 9, 4: 16, 5: 25, 6: 36, 7: 49, 8: 64, 9: 81, 10: 100, 11: 121, 12: 144}. The output is displayed in a light blue font on a dark background. The IDE also has a 'Run' button and a 'Share' button in the top right corner.
